REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Claims 1-6, 11-14, 16-21, 23-25, 30-36, 41-44, 47-50, 52-54, 59-65, 70-72, 74-76, 82, 83, 85-87, and 92-98 are allowed as the prior art does not teach or suggest the applicant's invention. Claims 1, 11, 16, 31, 41, 47, 50, 60, 70, 82, and 92 teach a method and apparatus for a data storage device. Regarding claims 1 and 31, the distinguishing elements of the claims teach a data storage device preamplifier circuit, a write amplifier having an input and an output; a read amplifier having an input and an output; and a loopback circuit that selectively connects said output of said write amplifier to said output of said read amplifier. Regarding claims 11, 41, and 92, the distinguishing elements of the claims teach a read channel circuit for a data storage device, a first counter that generates a first count of an attribute of a write signal that is output by said read channel circuit; and a second counter that generates a second count of said attribute of a looped-back write signal that is received by said read channel circuit. Regarding claims 16 and 47 the distinguishing elements of the claims teach a write amplifier that amplifies a write signal from said read channel circuit and that outputs said amplified write signal to the data storage device; and a read amplifier that amplifies a read signal received from the data storage device, wherein said loopback circuit communicates with said write amplifier and said read amplifier and selectively provides a loopback path to test the operation of said write amplifier. Regarding claim 50, the distinguishing elements of the claim teaches write amplifying means for amplifying a write signal from said read channel means and for outputting said amplified write signal

Art Unit: 2627

to a read/write device; and read amplifying means for amplifying a read signal received from the read/write device, wherein said loopback means communicates with said write amplifying means and said read amplifying means, wherein said read amplifying means is shut down when said loopback means connects said output of said write amplifying means to said output of said read amplifying means. Regarding claims 60, 70, and 82, the distinguishing elements of the claims teach a preamplifier circuit having a write signal input and a read signal output, receiving a write signal at said write signal input of said preamplifier; and selectively looping back said write signal to said read signal output.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
